# 1 [Computing graphical queries over XML data](#)

Sara Comai, Ernesto Damiani, Piero Fraternali

October 2001 **ACM Transactions on Information Systems (TOIS)**, Volume 19 Issue 4Full text available: [pdf\(707.80 KB\)](#)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The rapid evolution of XML from a mere data exchange format to a universal syntax for encoding domain-specific information raises the need for new query languages specifically conceived to address the characteristics of XML. Such languages should be able not only to extract information from XML documents, but also to apply powerful transformation and restructuring operators, based on a well-defined semantics. Moreover, XML queries should be natural to write and understand, as nontechnical person ...

**Keywords:** Document restructuring, graphical query languages, semantics

# 2 [Special section on advanced XML data processing: XML document versioning](#)

Shu Yao Chien, Vassilis J. Tsotras, Carlo Zaniolo

September 2001 **ACM SIGMOD Record**, Volume 30 Issue 3Full text available: [pdf\(716.34 KB\)](#)Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Managing multiple versions of XML documents represents an important problem, because of many applications ranging from traditional ones, such as software configuration control, to new ones, such as link permanence of web documents. Research on managing multiversion XML documents seeks to provide efficient and robust techniques for (i) storing and retrieving, (ii) exchanging, and (iii) querying such documents. In this paper, we first show that traditional version control methods, such as RCS, and ...

# 3 [Enabling full service surrogates using the portable channel representation](#)

Micah Beck, Terry Moore, Leif Abrahamsson, Christophe Achouiantz, Patrick Johansson
